

■ Sir Nicholas Nuttall and Lady Eugenie Nuttall with Tony Quinn

menon, and that the coral reefs around the world are in big trouble, and we need to do something about it. People don't realise that the world's reefs perform three vitally important functions; (1) they produce fish; (2) they produce sand and (3) they provide coastal protection. If we lose the reefs, then the sands will be eroded away and

the reasons for people to come to these wonderful islands will disappear. We can see this happening not very far from here in Haiti, because there the reefs have died off and the sea has become green and yellow.

EDUCATION

As I became more and more concerned about ecology I visited

Australia, England, France and the U.S.A. and every single person I met said: "Get into education. We don't think you will be able to do very much with the adults. The hope lies with the kids." Contrary to many other people, I believe that the battle for the world's future is one we can win. There may not be many victories for the environment in the next 20 years but I think underpopulated countries like the Bahamas and Ireland can show the way. From our visits to Ireland (and you know Eugenie my wife is half Irish!) I've learned that, like the Bahamas, it has a special magic. We must educate people, if we want to preserve this for future generations. Ireland was a shining light of education, religion, writing and learning in the past. St. Patrick's followers brought education back to Europe. The Irish have done it once and I think that education, newspapers such as yours and groups like BREEF can fill the gap in environmental education today.

Faster Tanning with Tyrosine

Melanin is the body's natural pigment which the skin uses to protect itself from excessive sunlight. A body that contains ample melanin will generally produce a much deeper tan. L-Tyrosine, an amino acid, has many roles in the body one of which is to become skin pigment (melanin) through the action of a special enzyme that requires the trace mineral copper. The more of these ingredients there are in the correct amounts in the body the easier it may be to produce melanin and acquire a tan with sun exposure. Tyrosine and Copper are now available in tablet form as Tyrosine Tan Tablets. By taking these nutrients the body's ability to produce melanin may be enhanced. This tanning supplement can be used for all skin types to help produce a deeper tan than normal. We have found that many fair skinned people who have had difficulty getting a tan were able to achieve a colour for the first time using this product.

PRICE OFFER
100 tabs £12.95 - 200 tabs £23.00

Tan without the sun...

Sunless Tanning Mist

Now you can have all the benefits of a stunning golden tan while avoiding the risks of excessive UV radiation. Our new Tanning Mist is a whole new break-through in 'Sunless Tanning'. Its long-lasting formula works fast and produces a fabulous golden tan overnight. It is ideal for use all year round and to produce a healthy golden glow for that special party or occasion. Suitable for men and women it is oil- and scent-free. Simple to apply, it dries fast to produce a quality tan whenever and wherever you want it.

PRICE OFFER
Sunless Tanning Mist - 1 bottle £10.50
- 2 bottles £19.00

Sunbed in a Bottle

THE NEW CONCEPT IN SUNTANNING

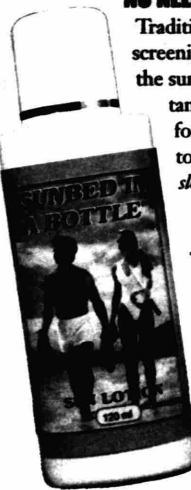

Now an entirely new concept gives you maximum tanning, with minimum time in the sun.

NO NEED TO SUNBATHE FOR HOURS:

Traditional sun lotions help prevent burning, screening out the hot burning (UVB) rays from the sun. Sadly they also screen out most of the tanning (UVA) rays. A traditional factor 10 for example will reduce the tanning rays to just 10%. Hence they can dramatically slow the rate at which you tan.

DEEPER SUN TAN:

This new lotion is designed to block out most of the burning rays while allowing 98% of the sun's tanning rays to remain. Now it may be possible to develop a much deeper sun tan in less time with reduced risk of burning.

PRICE OFFER
Sunbed in a Bottle - 1 bottle £10.50
- 2 bottles £19.00
